OBJECTIVE

MCA student and Python Developer with a strong foundation in Data Structures and Algorithms, Machine Learning, and Generative AI seeking a Software Engineer role. Committed to writing clean, efficient code and passionate about building scalable systems that solve real-world problems at scale.

EDUCATION

RJS First Grade College, Bangalore City University - Bengaluru, KA

Master of Computer Applications (MCA), Computer Science | Jan 2025 - Sep 2026

Relevant Coursework: Analysis of Algorithms, Operating Systems, Database Management Systems, Computer Networks, Software Engineering, Artificial Intelligence, Object-Oriented Programming

Shree Medha Degree College, Vijayanagara Sri Krishnadevaraya University - Ballari, KA

Bachelor of Computer Applications (BCA), Computer Science | Oct 2021 - Oct 2024

Relevant Coursework: Data Structures, Python Programming, Web Technologies, Discrete Mathematics, Computer Architecture, Linear Algebra

TECHNICAL SKILLS

Languages: Python, C, SQL, HTML, CSS

CS Fundamentals: Data Structures and Algorithms, OOP, Operating Systems, Computer Networks

ML and AI: Machine Learning, Generative AI

Frameworks and Libraries: NumPy, Pandas, Scikit-learn, Matplotlib, TensorFlow (beginner), LangChain

Tools: Linux, VS Code, Jupyter Notebook, Git, GitHub

Concepts: REST APIs, Recursion, Dynamic Programming, Graph Algorithms, System Design basics

PROJECTS

Stock Trading System | Python, Tkinter, SQLite | 2025

- Developed a full-stack stock trading simulation with dual interfaces: a CLI-based engine and a Tkinter GUI supporting user registration, login, portfolio management, and transaction history.
- Designed and implemented a normalized SQLite relational database with four tables (users, stocks, portfolio, transactions) enabling persistent storage of balances, holdings, and trade records with full CRUD operations.
- Built a real-time stock price simulation engine using Python's random module and Tkinter's after() scheduler, updating prices every 10 seconds with boundary checks to prevent negative valuations.
- Implemented an Admin Panel enabling privileged operations: adding new stocks, updating prices, and viewing all registered users, demonstrating role-based access control design.
- Handled complete buy/sell transaction logic including balance validation, portfolio quantity tracking, and atomic database commits ensuring data consistency across operations.

Memory Match Game | PHP, HTML, CSS, JavaScript | 2025

- Built a browser-based memory card matching game using PHP for server-side logic and session management, with HTML, CSS, and JavaScript handling the interactive front-end gameplay experience.
- Implemented card shuffle and grid generation logic in PHP using array randomization, dynamically rendering a 4x4 card grid with paired symbols ensuring fair and reproducible game states per session.

- Managed game state persistence using PHP sessions to track flipped cards, matched pairs, move count, and elapsed time enabling full game lifecycle from start to win detection.
- Designed a responsive UI with CSS flip animations and JavaScript event handling for card reveal logic, mismatch timeouts, and real-time move counter updates without page reloads.

CERTIFICATIONS

- Python Fundamentals for Beginners | Great Learning Academy | Sep 2023
- TCS iON Career Edge - Young Professional | TCS iON, Tata Consultancy Services | May 2026

ACHIEVEMENTS AND ACTIVITIES

- Consistently solved LeetCode problems targeting software engineering interview patterns, ranking in the top 20 percent in weekly contests.
- Completed Google's Introduction to Generative AI learning path, covering transformers, diffusion models, and responsible AI practices.
- Active GitHub contributor maintaining a public DSA solutions repository with structured documentation and complexity analysis.
